StockLOG — animals

SYNTHETIC ACCEPTANCE FIXTURE. AUD. Animal selection filters never clip lifetime financials. Unknown purchase cost makes P/L incomplete. Active animals show costs/revenue to date, not final realised sale. Timestamps are Unix seconds; property timezone Australia/Melbourne. Stored allocations retain 12 decimal places.

Selection: {"dataset": "animals", "filters": {"mob": "1"}, "columns": ["animal", "status", "cost", "revenue", "profit", "financial_complete"]}
